

nominated, but not ranked in the top 3' participants said they will attend the next one edition of the Prize in Morocco. And other young researchers said they will do their best to attend another occurrence of the Prize.

The Prize has rewarded at the same time 2 'forgotten' confirmed researchers and 2 young 'promising' ones, who bloom or will bloom in multi-cultural, multi-lingual, inter-disciplinary domains, as Charles François did, as pioneer, in his time. At equal skills and quality performance, the preference was given to these young people, to encourage them in **the very difficult way of the trans-disciplinarity**.

The Prize was opened to strengthen multi-disciplinary research and the multi-language communication of recent results, towards a worldwide education in Cybernetics and Systems Thinking (Bricage, 2017), which are aims of the Academy (Bricage, 2014). The final delivery of the Prize and certificates giving evidence of the excellence of the works is distributed only after publication of the papers in the journal of the choice of the organizers. But, with the following condition... According to the professional specificity of Charles François's international way of life, considering the linguistic diversity of the Academicians, the written final text must be at least a bilingual one, a trilingual is better. For example the complete text can be in English with a very extended summary in French, or the opposite. The text, either in French or in English, can be accompanied by an extended summary either in English or in French, another one in Spanish, or in another language (German, Arabic, Chinese, Portuguese, Russian). "Want to influence the world? Map reveals the best languages to speak." (Ronen et al., 2014). On the IASCYS website you will find the rules of the Prize, in English, Spanish, French and Russian.
